

## Claude for Edu – tips to get started

---

### Claude for Edu

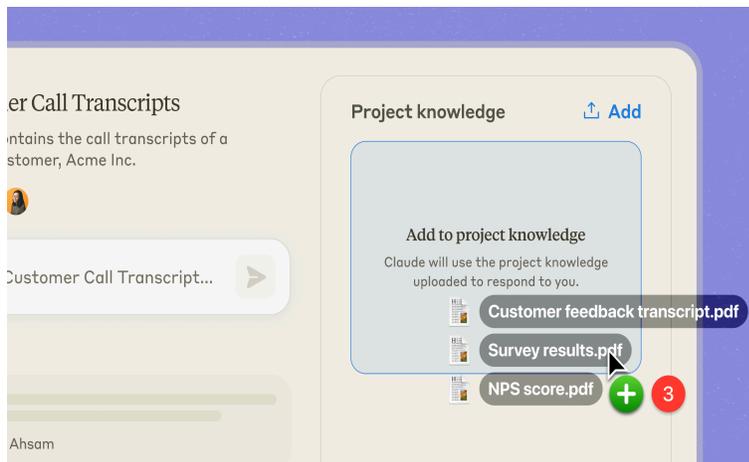

Claude for Edu is designed to seamlessly integrate AI assistance into your daily workflow and empower every team with trusted AI. Below is a quick overview of its key components:

- **Projects:** Dedicated workspaces that allow you to upload key documents and chat with Claude in a focused context.
- **Chats:** Conversational interfaces within projects where you interact directly with Claude, leveraging the context provided by the project's knowledge base.
- **Artifacts:** Outputs from your conversations with Claude, such as documents, code snippets, or diagrams, which can be easily modified and referenced.

These components work together to provide a comprehensive environment for AI-assisted work, enabling you to leverage Claude's capabilities efficiently across various tasks and domains.

### Projects and Artifacts

We've designed Claude for Work with Projects and Artifacts to help you get the best prompt responses from Claude with the least amount of effort.

### Projects

Projects allow users to create self-contained workspaces with their own chat history and knowledge bases. Within each project, you can upload documents, provide context, and have focused chats with Claude. You can upload relevant documents, text, code, or other files to a project's knowledge base, which Claude will use to better understand the context and background for your individual chats within that project.

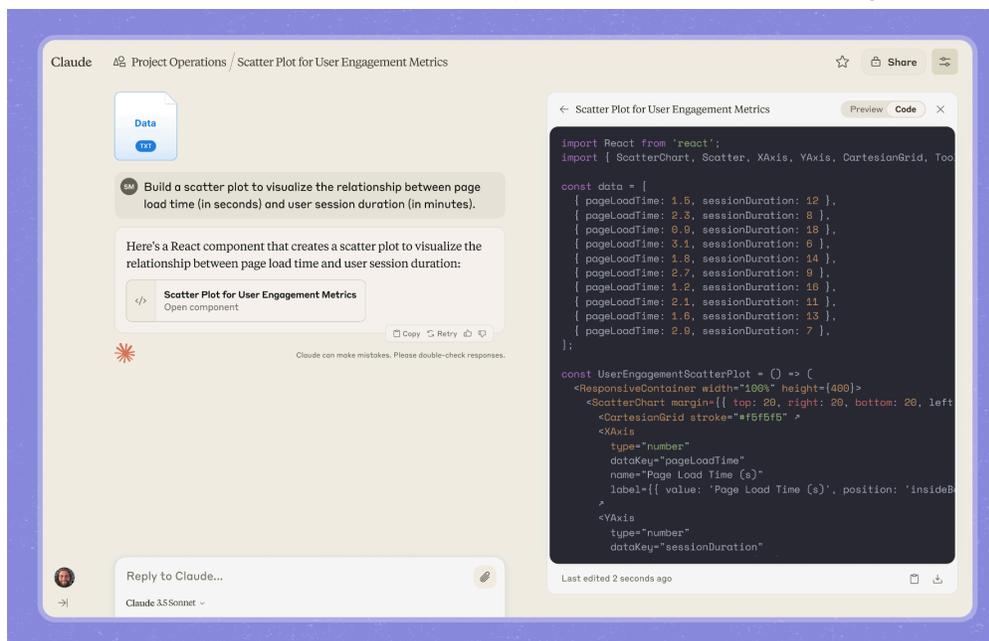

Each project includes a 500K context window (on the Enterprise plan) so you can add all of the insights needed to enhance Claude’s effectiveness. If you are using the Team plan, projects can be shared with other members of your organization, allowing for collaboration and knowledge sharing. Multiple members can contribute documents and work together within the same project environment.

*Pro tip: Name files you attach with titles that provide context to Claude (e.g. “Past product launch announcement”, “Past viral product launch Tweet”)*

*Pro tip #2: If you’re struggling to figure out what documents or context would be most helpful to include in your projects, ask Claude!*

## Artifacts

Claude can create content for you in a dedicated window separate from the main conversation. Artifacts make it easy to have Claude draft content that you may want to modify, build upon, or reference later. Artifacts are shareable assets within Projects. Examples of file types with Artifacts include documents, code snippets, HTML/CSS/JS Apps, SVGs and diagrams.

## Prompting Claude

Prompt engineering is the practice of structuring your instructions to a large language model, like Claude, so that it produces your desired response. In this document, we’ll cover general best practices and several examples related to different lines of business.
